Elements ko structure → Positions → Relative

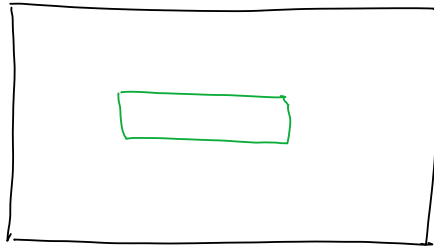

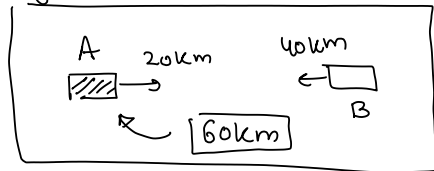

→ Absolute

→ Fixed

→ sticky

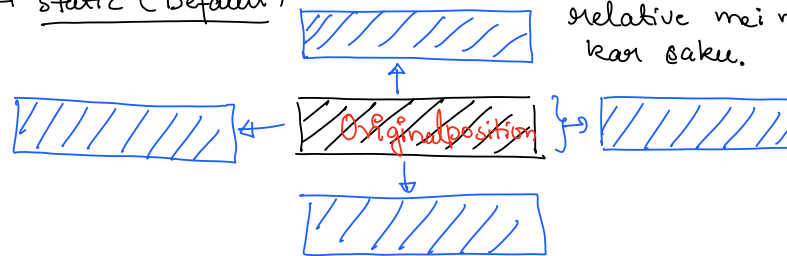

→ static (Default)

Physics ↘

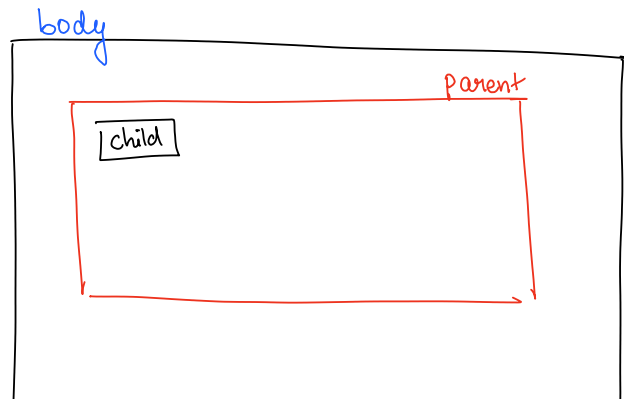

Original position ki space available rahe bhalo hi blank ho & Original position ke

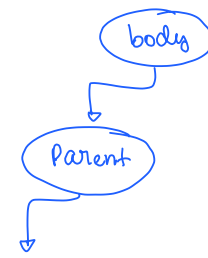

relative mei move kar sake.

Absolute → works wrt nearest ancestor that has been given position.

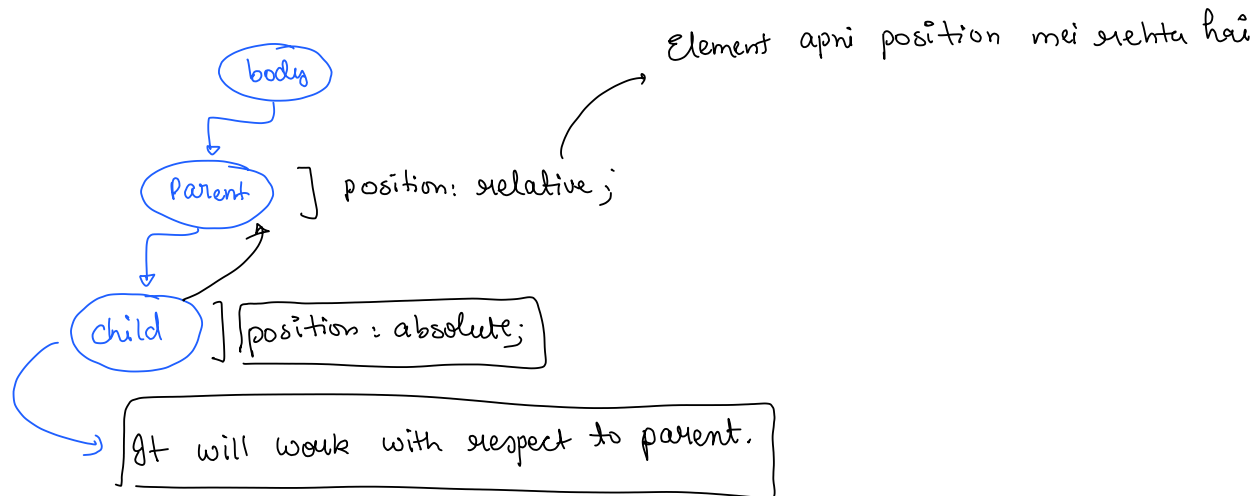

child → Ancestors (parent, body)

← body ke respect mei move karega

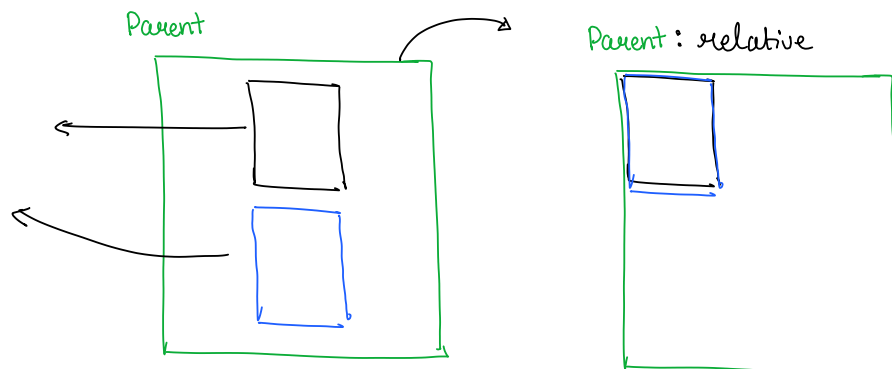

child] position: absolute;

Absolute ka use?

```

position: absolute
top: 0
left: 0
  
```

Arrangement of children inside parent

Flexboxes

Grid layouts

1 Dimension mei children ko arrange karne ke liye we use this..
